DETAILED ACTION

Election/Restriction

1. Claims 4-5 & 10 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made without traverse in Paper No. 8.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-2 are rejected under 35 U.S.C. 102(b) as being anticipated by Barnsteiner [U.S. Patent No. 2,225,762]. Barnsteiner (figures 1-11) teaches of a towel warmer and dryer cabinet comprising: a hollow cabinet having an open front side and laterally spaced side walls (fig. 1); a towel rod support frame (outer member of 24) having laterally spaced frame members positioned adjacent the lateral side walls of the cabinet (fig. 1) for supporting a towel support rod adjacent an upper end of the open front side of the cabinet; at least one towel support rod (first inner rod of member 24 closest to the open front) extending between and supported by the frame members adjacent an open front end of the cabinet and capable of allowing a towel to hang downwardly from the rod toward a bottom of the cabinet; and means (14 & 22 for example) on the cabinet for

Art Unit: 3637

mounting the support frame for movement of the at least one towel support rod through the open side of the cabinet between extended and retracted positions.

The cabinet inherently including means (conventional burner element not shown) for supplying heated air current movement [radiant air current produced by the element] from within the cabinet and forwardly through the open front side [when the door - not shown- is open].

Allowable Subject Matter

4. Claims 3 & 6-9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

5. Applicant's arguments filed March 13, 2003 have been fully considered but they are not persuasive. It is viewed that the prior art reference [Barnsteiner] adequately teaches applicant's claimed cabinet as stipulated above. The previous cited references have been rendered moot in view of the amendments to the claims and applicant's remarks of record. Additionally, In response to applicant's argument that the prior art is not able to support a towel on the rod, note the following: a recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the

Art Unit: 3637

claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim.
